**TECHNICAL ANALYSIS** – Technical Diagnosis – Moving averages give a good indication of the vitality of the share in the long run. From July 2016 the share price and the 20,50,200 moving averages have been in the ascendancy where the trend has seen higher highs since August 2016. The significant change in direction in July 2016 saw a break out from a previous high in May 2016. The upturn in the 200 Day Moving Average provides possible long term momentum to the upside. The falling wedge that was seen from 3 to 13 October reversed with bullish candlesticks reaffirming momentum. The 18 October candlestick shows that the investors sentiment were still confirmed and with the day’s range of \$1.80 and a high of \$7.00. The 21 October candlestick reaffirms the positive bullish stance with Hudson technologies entering into a higher plane of share momentum. Having assessed that recent share performance of Hudson has been encouraging and as a leading organisation in refrigeration services poised to benefit from an EPA mandated phase out of virgin gas production, I bought 1,037 shares at \$6.40 on 18 Oct 2016. **Please note this analysis is not advice but interpretation of potential market moves.** Past performance is no guide to the future. First Share Reviewed on 22 October 2016 at \$6.97 Current Price 1 December 2016 \$7.67
