

Aaron's trade explained using Gann's Lost Motion set up

When a low [26th September] approaches a previous low [22th August] after an intervening period AND there is a subsequent bullish confirmation in the day following [27th September] then it is possible that a lost motion is in evidence and momentum could see the share fly.

Previous 22nd August Low \$32.36 Close \$36.65

In the case of Aaron on 29th September Open \$35.91 High \$36.00 Low \$35.05 Close \$35.46
29th Sept took out previous close/low after intervening 24 days [nb 21 days ideal]

30th September Bullish spinning top as confirmation

2nd October Bullish Engulfing
